(54) DISPLAY AND GUIDE DEVICE FOR ELEVATOR

(11) 4-256672 (A) (43) 11.9.1992 (19) JP
(21) Appl. No. 3-36585 (22) 7.2.1991
(71) HITACHI BUILDING SYST ENG & SERVICE CO LTD
(72) HARUHISA NAKAMURA(1)
(51) Int. Cl⁵. B66B3/00

PURPOSE: To provide a display and guide device of elevator, which can give proper pieces of information to different passengers.

CONSTITUTION: Long storey information with detailed contents given by an information entering device 3 is stored in an information memory 2a, while short storey information consisting of a short text, for example merely a heading, given alike by the entering device 3 is stored in another information memory part 2b. Judgement is made on the basis of information from intra-cage destination buttons k_1 and the hall button on each floor if an applicable signal is a long storey operating command 1a or short storey operating command 1b. A control part 2d takes out information from either the long storey information memory part 2a or the short storey information memory part 2b selectively according to the result from judgement with the aid of a changeover device 2c, and displays a proper amount of information for applicable passengers on the display k_2 in the cage.
